# RescueNet® CaseReview

ZOLL®
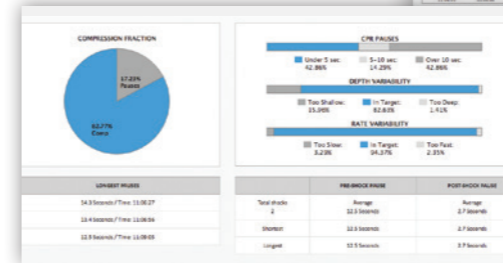

QA THE WAY YOU IMAGINE IT
Simplified Data Collection

With the push of a button, professional rescuers can now directly send ZOLL AED 3™ files from the rescue scene to their system.

Data cards and cables are a thing of the past. With RescueNet® CaseReview, access to case files is as fast as opening the browser of any web-enabled device. Case files are available moments after their transmission. One hundred percent case review is quickly within reach.

At-a-glance dashboards simplify a complete review of individual cases.

RescueNet CaseReview puts 100% of your cases within reach.

FILES IMMEDIATELY AVAILABLE

NO DATA CARDS OR CABLES

SAME-DAY DEBRIEFING

CUSTOMIZED SUMMARIES

CLOUD BASED

ACCESS FROM ANY WEB-ENABLED DEVICE

A New Standard: Same Day Debriefing

Event reports are a click away. Choose a case from the list display in your browser, open it, and examine the information. Key QA elements presented in colorful graphics make reviewing simple.

Responders may be debriefed the same day. Event-specific reports are easily distributed with a few clicks. Crews can review their own performance while the event is fresh in their minds.

The ERC On Debriefing

"Data-driven performance-focused debriefing has been shown to improve performance of resuscitation teams. We highly recommend their use for teams managing patients in cardiac arrest."[1] Further, "Debriefing and feedback enables identification of CPR quality errors and prevents their repetition."[2]

[1]Grief R, et al. *Resuscitation.* 2015;95:288-301.
[2]Bossaert LL, et al. *Resuscitation.* 2015;95:302–311.

RescueNet CaseReview makes it possible to answer questions such as:

- What do system-wide CPR pauses look like for intubated patients?
- How do CPR fractions differ between peak staffing and off-hours?
- What do post-shock pause times look like in the system?
- What are the system-wide CPR quality metrics, such as fraction and compression rate, depth and release?

Turn Case Files Into Actionable Information

The real power of RescueNet CaseReview comes from its ability to collectively summarize system-wide performance. This next-generation tool delivers the capability to summarize the full set of event files in order to recommend quality and system-level improvements. Pre-configured reports, in combination with tag-and-query filter capabilities that produce customized summaries, shed light on system trends and advanced processes.
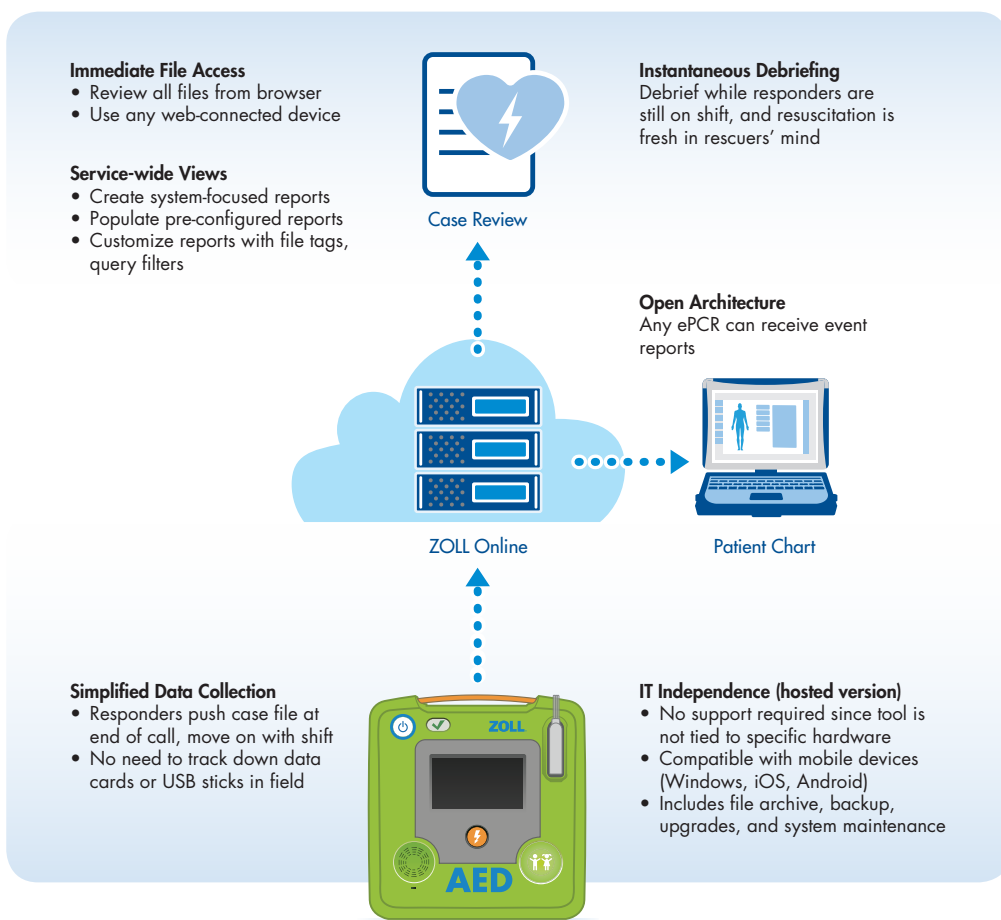

IT and Platform Independence

RescueNet Case Review can be put in place without a network or IT specialist. No special hardware is required to use its capabilities. A service's secure account can be accessed from any web-enabled device.

The cloud-to-cloud interface makes ePCR integration more stable. When CaseReview is updated, ePCR devices no longer need to be modified. Installing CaseReview gives you IT independence.

Optimizing the QA Process

Immediate File Access
- Review all files from browser
- Use any web-connected device

Service-wide Views
- Create system-focused reports
- Populate pre-configured reports
- Customize reports with file tags, query filters

Case Review

Instantaneous Debriefing
Debrief while responders are still on shift, and resuscitation is fresh in rescuers' mind

Open Architecture
Any ePCR can receive event reports

ZOLL Online

Patient Chart

Simplified Data Collection
- Responders push case file at end of call, move on with shift
- No need to track down data cards or USB sticks in field

IT Independence (hosted version)
- No support required since tool is not tied to specific hardware
- Compatible with mobile devices (Windows, iOS, Android)
- Includes file archive, backup, upgrades, and system maintenance
